

USE OF YOUR AUSSIE CLEAN SWEEP

Your Aussie Clean Sweep is designed to function on both of our court surfaces i.e. tar-macadam and synthetic grass. There are some minor variations in technique dependant upon the type of surface and debris; however the following basic instructions apply to all courts. As with tennis-practice makes perfect.

To remove leaves and other debris, make sure your Aussie Clean Sweep is right side up and simply pull it BRISKLY over the court. It is more efficient to start in the areas of least debris and finish in areas of most. To remove leaves etc. collected on the Aussie Clean Sweep, hold the bar and shake debris into a heap at a suitable disposable point (outside gates or in corner of courts) . If there are a lot of leaves do small sections at a time and shake off leaves often. You may have to cover the court several times, alternating the direction of travel each time. Do not worry that the front row of the Aussie Clean Sweep does not contact the court - it is not designed to do so.

THE SECRET: Walk briskly and shake off often.

For grooming tar-macadam Courts under wet conditions it can be advantageous to use the Aussie Clean Sweep upside down. This helps prevent clogging.

Care of your Aussie Clean Sweep

Your Aussie Clean Sweep is made of the best quality durable materials and should be left FLAT on the court ready for use. If it becomes kinked it will not function efficiently. However, leaving it flat in the sun or a suitable warm place can rectify this.
